## Experience in Applications

For your high value chocolate & specialty products to maintain their quality, you need to maintain their temperature profile during mail

### High Value Chocolate Products

order and "LTL" truck transport. Dry Ice Corp. has been supplying various forms of dry ice to insure our customer's chocolate & specialty products arrive at their destination within the temperature profiles required! We have been servicing the leading candy, specialty and mail order companies along with Drug Store Chains and LTL shippers who transport chocolate candy and specialty products for over 40 years. Our six branch distribution network covers the Northeastern United States! Our continuing strength is "customized" packaging and professional distribution logistics.

Please contact us to discuss your current or future application that requires Portable, Cost Effective Dry Ice Refrigeration.

Experienced "local" Account-Applications personnel available to visit with you and discuss your application.

### The Company we Keep!

We service many of the leading fine chocolate candy and specialty product companies in the Northeastern United States with their dry ice refrigeration requirements.

### Benefits of Dry Ice—Refrigerated Transport!

Dry Ice is said by many to be the most cost effective, environmentally friendly, portable refrigerant known to man. The cold power,  $-109^{\circ}\text{F}$ , of this innovative product is being used to maintain sub-zero, frozen and refrigerated temperatures for numerous products. **PROVIDES REDUCED REFRIGERATION EXPENSES!**

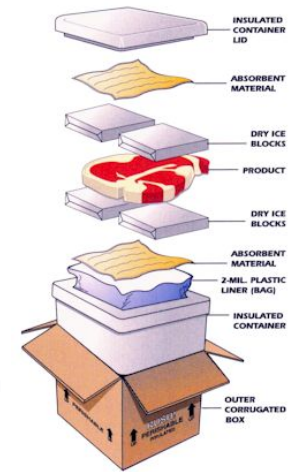

Dry Ice goes from the solid state; block, pellet, disk, etc., directly to a gas. It does not go into the liquid stage as it transfers it's cold power to your products. This is a great benefit in that there is no moisture concern for your packaging or product! **IMPROVED PACKAGING!**

Dry Ice removes 2x's the heat per pound as water ice. Preventing heat buildup encourages longer shelf life of PERISHABLE products! The inert carbon dioxide ( $\text{CO}_2$ ) gas is an excellent preservative and inhibits the growth of many forms of bacteria.

### Dry Ice Refrigeration versus Gel Pack/Phase Change Materials

Dry Ice requires significantly less weight than gel packs and less volume in your shipments. **REDUCE MAILING COSTS SHIP MORE "PROFITABLE" PRODUCTS!**
